Fleet Telematics

Go beyond simple A to B routing and increase fleet performance with advanced
real-time data

Transform your fleet management

The old way of recording mileage and processing driving times is over.

Fleet Telematics automates this process, with one of the most advanced and intuitive algorithms in the industry.

Data feeds from your vehicles are combined with our advanced algorithms to create actionable intelligence. This helps you make faster, smarter decisions for your fleet.

Track transit times, toll charges and routes with the help of Fleet Telematics. From locally enforced speed limits, to inclines and curves on the road – you'll be well-informed of the factors that impact performance, and how to improve the safety of your drivers, cut costs and speed up operations.

Key differentiators

## Boost performance with advanced algorithms

01 / ??

Improve efficiency

Track key aspects of your fleet's performance and spot issues as they appear. Fleet Telematics helps you record journey and route data, including location, rest times and road conditions, in real-time.
02 / ??

Keep your drivers safe

Help drivers avoid accidents or breakdowns by keeping dispatch and fleet in direct communication, for new route suggestions and to bypass hazards.

03 / ??

Reduce costs

Make cost-effective decisions and create custom routes for cheaper and shorter journeys. Calculate toll and fuel costs, while factoring in local speed limits, rest stops and desired arrival time.

Developer benefits

Ready-to-use tools
Easily match GPS data to a road network, change geometries, modify road restrictions and more.

Advanced data sets
Integrate HERE map attributes such as truck speed limits, road inclines, blackspots and traffic lights.

Easy data upload
Display your data on HERE maps via easy admin tools for storage, upload and management.
